

Honeywell Forge | HCE | Connected Workforce Competency video script

222 WORDS@125 wpm = 1.78 min.

Hi, everybody, XXXXX here with another software innovation from Honeywell to help you adapt to our ever-changing world.

Between the widening worker gap and graying workforce,
there aren't enough runners in the knowledge-sharing relay
to avoid fumbling as they pass the torch
or stumbling to keep it lit
while they race to meet production.

So, we're introducing Connected Workforce Competency...

to empower your next generation of operators
with modern tools they expect
to upskill workers and enable safe and efficient production.

(On-screen text:
Loss due to human errors

You asked, and we listened.

It's the same, accurate training simulator you know and love,
hosted in the cloud and delivered through a browser,

to afford the convenience of secure, remote access
and connect teams anytime, anywhere.

Connected Workforce Competency affords flexibility...
and helps reduce the high cost of training by going virtual.

Instructors can assign, manage and schedule lessons...

...and observe trainees across your enterprise in real-time
as they collaborate and interact with safety and control system emulators
to explore different futures before they occur.

Role-based dashboards give trainers, operations managers and admins
access to the KPIs they need to certify operators...

...and, as Connected Workforce Competency continues to expand,
content creators can update and maintain models
to keep on rolling with the changes.

Gain visibility and boost your capability to pivot
with Honeywell Connected Workforce Competency.

Until next time...
