Honeywell | HCE | Cyber Insights video script

283 WORDS@125 wpm = 2.3 min., 2.1 wps

I'm XXXXX from Honeywell,
and today, let's chat about our all-in-one software
that'll revolutionize your OT cybersecurity.

You're the one calling the shots on your cybersecurity,
and you've worked hard to assemble all the right tools and team to tackle it.

But if you're only meeting the bare minimum for compliance
and your IT strategies aren't quite cutting it for OT cybersecurity,
then you might be in the dark about your real security situation.

No one wants to be the next headline, right?
Enter Honeywell Cyber Insights.

We've got your back, protecting your OT environment like it's our own.
Our software automates data gathering in real-time,
beaming it up to the cloud
to give you a clear picture of your plant's security,
cutting down risks and boosting resilience
by catching threats before they catch you.

Built by OT experts, for OT systems,
and carefully set up on-site,
chances are, Honeywell made the DCS your plants rely on.

Your on-site crew can keep an eye on
and manage the OT network around the clock
to spot missing patches, compliance slip-ups, and red flags for attacks.

Let's face it, someone might already be in your network.
But CSI can find and resolve configuration clashes…
stopping threats in their tracks within minutes.

Give your team the power
of historical, real-time, and predictive analytics and visualization
while integrating seamlessly with your entire security system
for hassle-free reporting,
all in one comprehensive system.

Cyber Insights only gets smarter with time, and our ongoing cyber care services pack even more value.

Remember, it's not about if an attack on your OT network will happen.
It's about when.

So, let's talk about how Cyber Insights
can strengthen your OT cybersecurity posture
and help you dodge costly downtime.
