

Honeywell Forge | HCE | Production Intelligence video script

327 WORDS@125 wpm = 2.6 min.

Hi, everyone, XXXXXX here to introduce one of our key software solutions for delivering sustainable and reliable operations. Honeywell Forge Performance+ for Industrials | Production Intelligence.

As the world turns, so do the conditions surrounding the critical processes that support our supply chain.

But if you're relying on manual methods to wrangle data from across all your sites, you'll never get hold of the real key indicators you need to unlock your performance.

Production Intelligence is a cloud-based solution that automatically brings all that siloed data together under one system of record, and uses analytics and visualizations to make sense of it all in real-time, so decision-makers can stop struggling for visibility and start focusing on setting targets that produce consistent, quality products.

Production Intelligence breaks down its offerings into three modules to help you digest your analytics in terms of:

Monitoring, to help explain "What happened?", (CORE)

Diagnostics, to understand, "Why did it happen?", (DIAGNOSE)

and Prediction to anticipate "What's likely to happen?" (PREDICT)

So, you can set up persona-based alerts to notify you and your team of any anomalies and deviations. (CORE)

Then, when something goes awry, you'll follow guided diagnostics and drill down into the root cause analysis to identify the triggers that disrupt processes and impact quality. (DIAGNOSE)

And from there, you'll gather predictive insights and recommendations that'll help you reduce risk, improve safety and avoid downtime. (PREDICT)

Role-based dashboards let your COO share strategic insights with plant managers, including planning and capacity data and analytics, efficiency KPIs and conversion cost and compare forecasted production against actual performance.

And our intelligent search and exploratory analysis boost worker productivity by connecting the dots and clearing away the clouds to enlighten operators about critical conditions.

Enterprise Intelligence will help you maximize your plant's throughput capacity by aligning decision-makers and coordinating production around a common, data-driven vision.

It's part of the Honeywell Forge family and one more reason that Honeywell is at the forefront of industrial-grade software.

Until next time...
