

Any vehicle I want. Money no object

A friend recently asked what vehicle I'd want if money were no object. I couldn't answer.

What criteria? Style? Utility? Driving pleasure?

The next morning I thought about a helicopter or maybe a drone. But those things crash a lot.

Then, I thought about funding teleportation research by connecting the leading quantum physicists. But that would take too long.

So, it's probably better to use the same quantum physicists to fund time travel, develop teleportation using future technology, and bring it back. Two-for-one. Then you could be anywhere, anytime. Prioritize.

Probably would have to involve quantum computing, machine learning, and maybe the large hadron collider to get a fraction of things done in our lifetime, even with unlimited funds. And there's probably overlap.

Might have to clone the physicists for more manpower.

Although, prioritizing AI and machine learning could surpass human intelligence and achieve singularity.

OK, so reprioritize: Singularity, then time travel, then teleportation. 👍

I'd still like that in a manual transmission.

Okay, accelerate CRISPR and genetically modify ourselves to grow wings and fly.
